EACTS Skills Programme

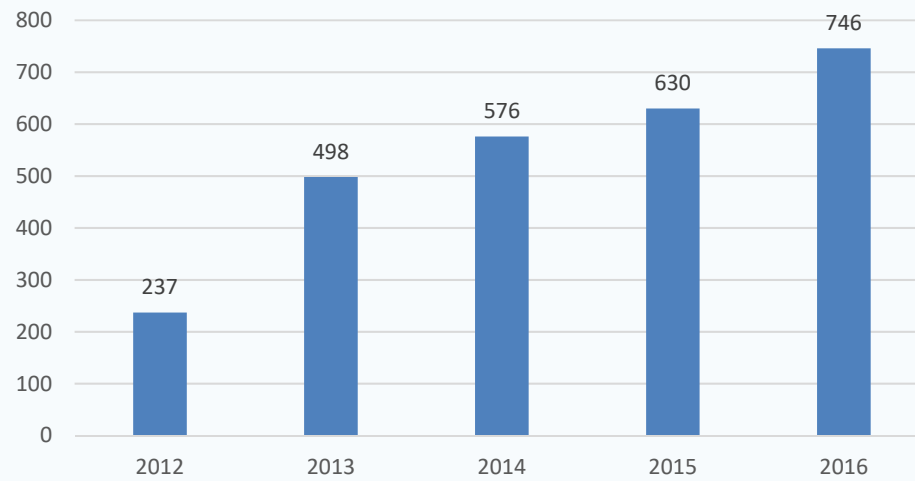

<p>The EACTS Skills Programme will each have up to five learning modules. The first three modules can be taken in any order, but a progressive order is best.</p>	
1	<p>A "professional challenge session" at the Annual Meeting. This module will offer keynote lectures on the state of the art of the specific technique with experts, followed by a demonstration of the technique by video or live surgery and a discussion on complications that may arise when applying this technique. Competency to be acquired: critical thinking, decision-making, Principles of Quality and Safety Improvement</p>
2	<p>A course on surgical anatomy, physiology and principles of surgical and non-surgical treatment in the specific area at the EACTS House in Windsor. Competency to be acquired: knowledge and comprehension, decision-making, Medical Professionalism, Evidence and Guidelines, Principles of Quality and Safety Improvement.</p>
3	<p>A course of 2-3 days "on site" in a hospital with a large experience of the technique. This module will offer interactive discussions with experts in the field and demonstration by live surgery on how the technique can be applied. The module may also include a hands-on aspect in a simulated environment. Competency to be acquired: knowledge, medical expert.</p>
4	<p>The opportunity to visit an EACTS accredited centre a certain period of time to participate in the operating room as an observer or with a "hands-on" aspect in a real-world environment. Competency to be acquired: technical skills, medical expert, Principles of Quality and Safety Improvement.</p>
5	<p>Clinical proctoring in the trainee's own centre; today a surgeon is obliged to receive proctoring before obtaining unrestricted hospital privileges to perform the new procedure, the trainee should demonstrate the awareness of competencies. Competency to be acquired: technical skills, medical expert, Principles of Quality and Safety Improvement</p>
